DETAILED ACTION

Response to Arguments

1. The indicated allowability of claim 28 is withdrawn upon a review as the method claim substantially corresponds to the subject matter of claims 1 and 3 (now cancelled). It is regrettable that the indication of the allowability of the claim might have caused inconveniences to applicants.
2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 102

3. Claim 28 is rejected under 35 U.S.C. 102(e) as being anticipated by Brissette et al (US 6,384,634, cited previously).

Brissette et al discloses a method, see Fig.1, comprising:

Producing “a source enable signal” (122) based on a synchronous pulse signal (write clock), the enable signal enabling the capture data from a source domain, and

producing the enable signal until the data is available to the source register. See col.4, lines 53-56 describing when the buffer is full, the read data will be junk data, indicating that the source inhibit signal is maintained until the data is available to the source register.

controlling the production of the source enable signal “based on a relationship between a source domain clock and a destination domain clock until the data is available for transmission.” See col.6, line 59 – col.7, line 9.
